### PROJECT DESCRIPTION:

Need a pre-engineered package plant destined for a harsh northern environment? Do you require a plug and play option for you to minimize site installation, set-up, and start-up time?

Here is one of our Chemical Enhanced Oil Recovery (cEOR) packages sent to the Alaskan North Slope. This 4.8 MT/day Polymer Flooding package will help our client to extract more of their reservoir's oil soon. This plant was custom designed and built in 5 months from PO to ready to ship, meeting the client's requirement for an accelerated delivery.

Our EPCM team at ClearBakk is well versed in providing engineered solutions for a variety of process applications, ranging from tertiary recovery to water and wastewater treatment. Particularly, solutions within extreme environments and remote decentralized locations.
